Introduction

Advantech's ULI-227TL is an RS-232 to current loop converter. Its port-powering is adequate for passive loop installations; a PSU (sold separately) is required for an active loop. Advantech ULI-227D5 and ULI-227D3 TTL/CMOS adapters convert two channels (TX and RX) in each direction (bi-directional) from RS-232 to TTL/CMOS signals and vice versa. Powered from RS-232 data and handshake lines. Use with micro-controllers, programmable logic controllers (PLCs) and other devices that support TTL.
