Low Voltage Dual D-Type Positive Edge-Triggered Flip-Flop

74LVX74

TSSOP−14 WB
CASE 948G

General Description

The LVX74 is a dual D−type flip−flop with Asynchronous Clear and Set inputs and complementary (Q, $\overline{Q}$) outputs. Information at the input is transferred to the outputs on the positive edge of the clock pulse. After the Clock Pulse input threshold voltage has been passed, the Data input is locked out and information present will not be transferred to the outputs until the next rising edge of the Clock Pulse input.

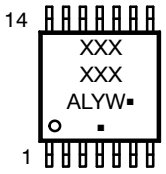

Asynchronous Inputs:

- LOW Input to $\overline{S}_D$ (Set) Sets Q to HIGH Level
- LOW Input to $\overline{C}_D$ (Clear) Sets Q to LOW Level
- Clear and Set are Independent of Clock
- Simultaneous LOW on $\overline{C}_D$ and $\overline{S}_D$ Makes Both Q and $\overline{Q}$ HIGH

Features

- Input Voltage Level Translation from 5 V to 3 V
- Ideal for Low Power/Low Noise 3.3 V Applications
- Guaranteed Simultaneous Switching Noise Level and Dynamic Threshold Performance
- Pb−Free, Halogen Free/BFR Free and RoHS Compliant
